linkedin.com/in/stevanusmp

Cyber security analyst in a regulated banking environment, working where devices meet the network: network access control, web security at the edge, and detection. I tune controls against real traffic rather than vendor defaults, and automate the repetitive parts with Python.

Open to network security roles in Singapore, Australia and Europe.

Experience	Cyber Security Analyst Group IT Security, Bank Central Asia (BCA), Jakarta	2023 to now
	- Administer and monitor the bank-wide web security stack, from on-premise proxy appliances to a cloud security edge. - Part of the team that moved web security for more than 83 branches onto a cloud security edge while keeping policy behavior consistent. - Operate network access control: device discovery, fingerprinting and classification, compliance policies and segmentation decisions across branches and data centers. - Design and enforce proxy policy: URL, IP and subnet classification, access control, traffic filtering and identity-based rules. - Support proxy and DLP integration and analyze secure traffic routing. - Troubleshoot with proxy, NAC, network and DLP logs to find root causes and contain incidents, then document findings so the next analyst starts from evidence. - Wrote the SOPs, RACI matrices and swimlane flows for how proxy exceptions are requested and approved. - Build Python automation to normalize, deduplicate and classify large IP and URL datasets (policy feeds, blocklists).	
	Sole IT Engineer Zalmon Fabric, Indonesia	2017 to 2023
	- Ran all IT functions alone: networking, systems administration, troubleshooting and internal support. - Designed and maintained small to mid-scale networks for daily operations. - Built and maintained frontend, backend and database-driven apps for internal workflows.	
	Earlier ventures	2020 to 2022
	EdooMoo, founder and full-stack developer (2022): built a learning platform end to end and ran product and operations. Rooma Living, co-founder, HR and General Manager (2020): led operations, recruitment and team development for a furniture startup. Zayana Organic, frontend developer: designed and built the platform UI, with Liquid templating.	

Skills	Access control	Network access control, device discovery and classification, 802.1X, compliance orchestration, segmentation
	Web security	Explicit and transparent proxy, secure web gateway, ZTNA, DNS-layer security, identity-based policy
	Detection	IPS tuning, DLP integration, log analysis and root cause analysis, incident triage
	Networking	IP addressing, subnetting and CIDR design, firewall and traffic policy enforcement
	Automation	Python for data processing and reporting, Active Directory

Certification	CompTIA Security+ ce	Dec 2024 to Dec 2027
	Credential ID COMP001022656054. CySA+ in progress.	

Education	B.Sc. Computer Science BINUS University, Bandung	2018 to 2023
